(OECD STI Outlook 2016)

Paris, OECD Headquarters, 17 December 2015

Urban Mobility System Upgrade

How self-driving cars could change city traffic?

<https://www.youtube.com/watch?v=j9kKoRHl-LI>

News!

- Most of the benefits (in reducing number of vehicles) comes from the **sharing aspect** (shared vehicles and shared minibuses).
- This is enabled through innovations in **data use** and provision and (of course) use of **mobile devices**.
- Automation (self-driving cars) would have impact more on the cost side (labour use).
