

Readiness indicators: inputs to the space economy (OECD Handbook on Measuring the Space Economy)

Chapter 5 examines the readiness factors of the space economy, i.e. different elements that are necessary for the development of space activities. These elements encompass the technical, financial and social infrastructures that enable the production of space-related hardware or the provision of services. This chapter examines the following indicators: government budgets for space activities (both for public space programmes and for R&D activities) and human capital.
