

International Energy Agency Implementing Agreements (Meeting Global Challenges through Better Governance: International Co-operation in Science, Technology and Innovation)

The International Energy Agency fosters multilateral research collaboration on energy-related issues in a number of ways. Multilateral technology initiatives called implementing agreements are a key aspect of this collaboration. Implementing agreements include IEA member and non-member countries, as well as industry, international organisations and non-governmental organisations. They pursue a broad range of research topics and are financially independent from the IEA Secretariat. They share costs and tasks and are mostly collaborations among actors of equal or nearly equal capacities. A few focus on scaling up capacities in less developed countries.
