

Marine biotechnology for economic and social productivity and environmental sustainability (Marine Biotechnology: Enabling Solutions for Ocean Productivity and Sustainability)

Advances in science and technology in the last decade have increased our understanding of ocean bioresources and renewed interest in the field of marine biotechnology. As governments recognise marine biotechnology's potential to address some of today's global challenges, they are incorporating marine biotechnology in their strategies for innovation, national prosperity, and economic and social growth. As marine biotechnology becomes a prominent feature of these strategies, it will be important to ensure that the field is developed in a sustainable manner.
