

## India (SMEs, Entrepreneurship and Innovation)

The Science and Technology Policy of 2003 was a landmark initiative in that it ended India's historic emphasis on highly protective strategy for domestic technology development. Instead, a bolder approach to international co-operation to meet national developmental imperatives has emerged as the norm for public policy. The development of a robust legal framework conducive to the establishment of a highquality technology environment reflects the strength of the role of government and rule of law in India's innovation and entrepreneurship.
