Going one step further: Automatic text analysis techniques

- Analysis of text's contents, properties and characteristics allow **not to read the text** but **to analyse and interpret representations** of the **information contained in those documents**
- Application of different **text-mining tools and techniques aimed** at to extracting information from texts (including the digital platform **CORTEXT** (www.cortext.net) and **iFora** database and visual interfaces, **Taltac** and **Spad**, **Iramuteq** and visual interfaces

Going one step further: Automatic text analysis techniques

- **Pre-processing of TIP documents** over 25 years resulting in a total of 116 reports and 160 agendas/summaries
- Presentation reflects **perspectives from 4 teams' analyses** with own methodologies & tools
- **Words of caution:**
 - Results are dependent on data and methods and explain differences in findings
 - Results are sometimes preliminary and early assessments
 - More detail is available from research teams

There is much more to explore

- Possible **12-13 March** workshop in Paris (back-to-back with CSTP)
- **Agenda items:**
 - Full presentation of results of the text-mining analysis of the TIP corpus
 - How to use semantic analysis for innovation policy (detect trends, analysis, etc.)
 - Best practice of semantic analysis (strengths and pitfalls, data quality, etc.)
 - “Hands-on” experience of the possibilities of text-mining (and of its limitations)

Semantic analysis of 100 TIP reports using the IPP vocabulary

Policy mixes, policy processes & policy rationales: an analysis of OECD TIP working group 1994-2014

Philippe Larédo & Antoine Schoen

RISIS

Research infrastructure for research
and innovation policy studies

Themes: A focus on the 13 policy areas

POLICY AREAS	terms	P1	P2	P3	total
Public research	33	25%	25%	18%	23%
Knowledge transfer & commercialisation	23	12%	9%	9%	10%
Open science	4	0%	0%	10%	3%
Human resources	11	10%	3%	2%	5%
New and/or specific technologies	12	18%	6%	3%	9%
Services	9	3%	8%	1%	4%
Intellectual property	11	8%	16%	5%	10%
Tax incentives	9	5%	7%	1%	4%
Smart specialisation	4	0%	0%	10%	3%
Public private partnerships	7	2%	11%	17%	9%
Environment and green development	18	11%	5%	9%	9%
Global challenges	6	0%	3%	10%	4%
Other policy areas	13	4%	7%	5%	5%
	160	100%	100%	100%	100%

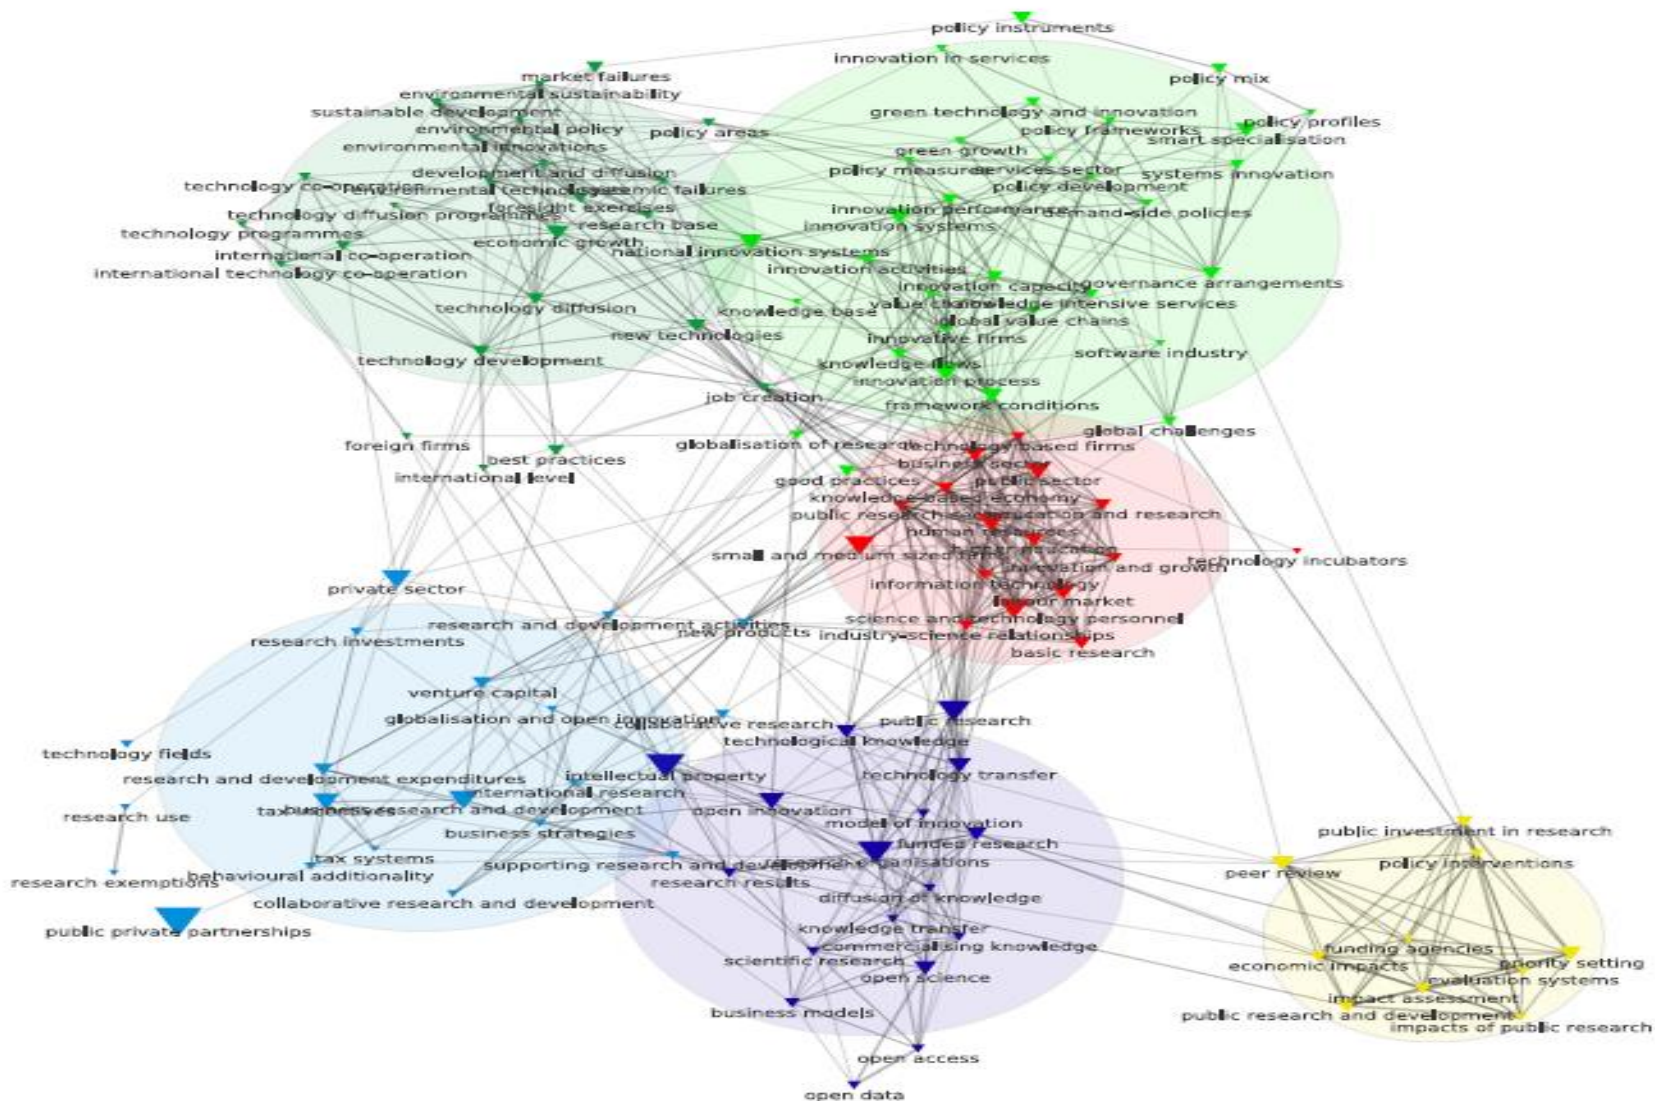

Number of terms per area

Occurrences of terms per area over the period
P1=1994-2000; P2=2001-08; P3=2009-14

Two major results:

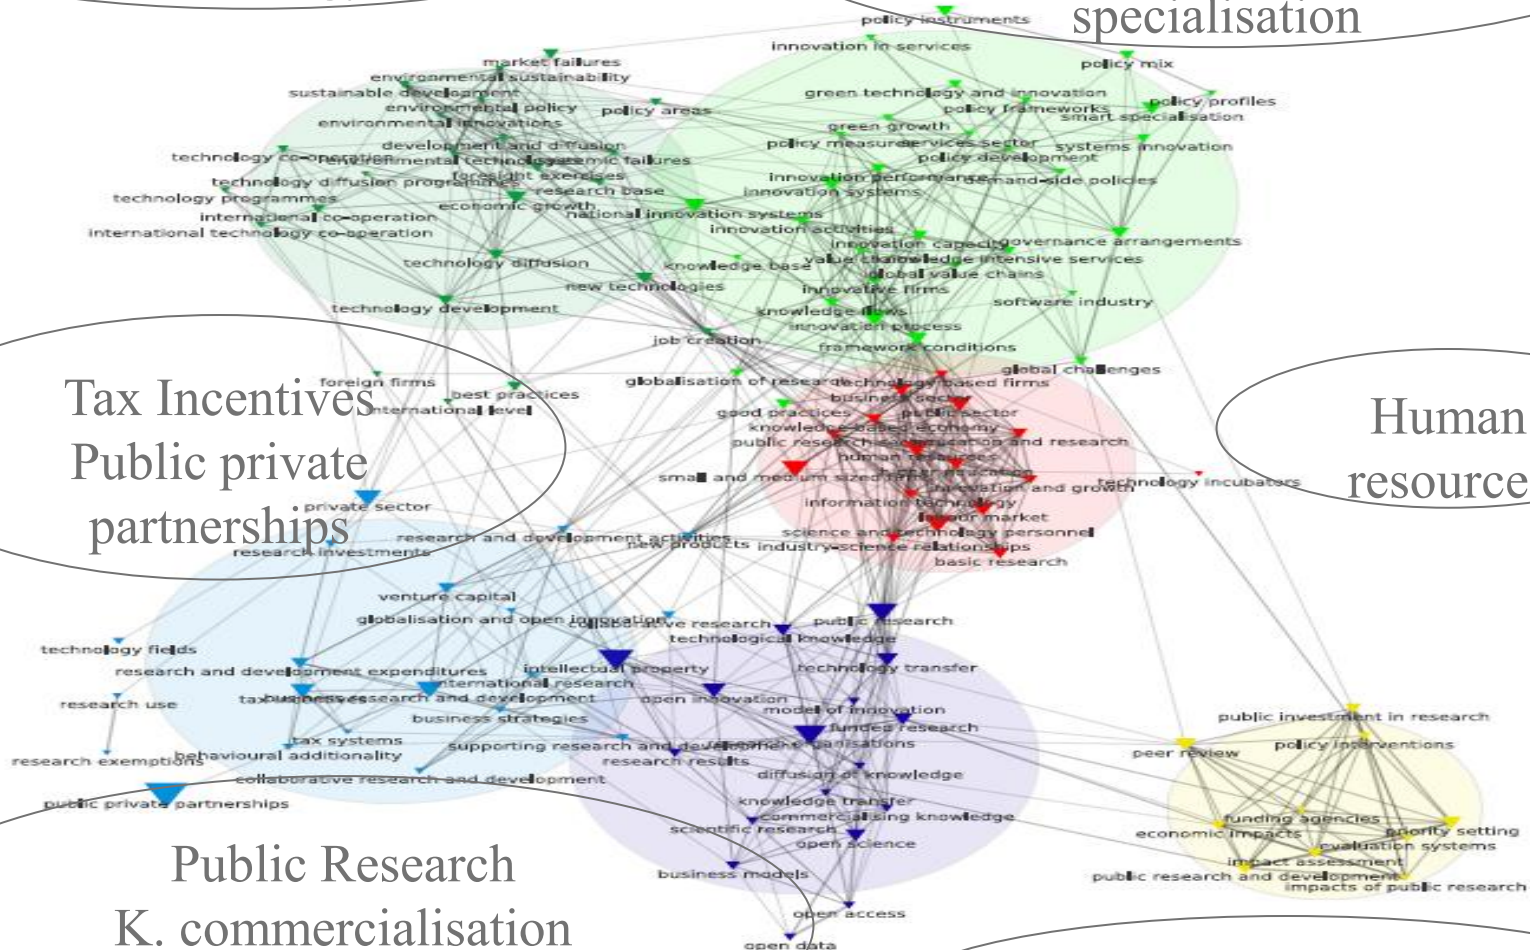

- 1) Unequal importance of themes: 5 themes represent 2/3rds of occurrences
- 2) only 4 areas are equally present over the period, 7 peak in only one period, 2 are nearly absent from one period

An overall views of links: 6 clusters highlighting ‘sub’ policy mixes

Policy processes & evaluation

Clusters: policy rationales & processes

Conclusions

- Innovation policy changed substantially over the past 25 years and 49 TIP meetings ...
- ... at the same time as a few themes have remained the same
- Semantic analysis itself and other new tools may mark new explorations of those very themes
