

Policy recommendations (Knowledge-based Start-ups in Mexico)

This chapter proposes recommendations for strengthening the innovation ecosystem to favour the creation and expansion of knowledge-based start-ups within the general framework of Mexico's science, technology and innovation (STI) policy. Drawing on examples of good practices in more advanced countries it suggests possible policy initiatives to develop this ecosystem through improved governance mechanisms and more dedicated support instruments. A number of recommendations go beyond the competence of STI policy makers to encompass more general framework conditions and regulatory and taxation issues.
