

Multi-level Governance to Promote Regional Competitiveness and Innovation systems (OECD Reviews of Regional Innovation: 15 Mexican States 2009)

All levels of government can influence the competitiveness of a region. While the competitiveness of a place is due to a number of factors, the focus for this review is on what can support productivity improvements for firms via clustering and regional innovation systems. While Chapters 2 and 3 reviewed the policies at national and state levels that may reinforce these phenomena, this chapter focuses on the governance arrangements that could support such policy goals.
