

Metrics and evaluation for universities and PRIs

Multiple measures can be used to proxy the contributions of universities and PRIs to innovation, including measures dealing with innovation inputs, innovation processes, and innovation outputs. Measures may:

- Focus on input to universities and PRIs' innovation, such R&D expenditure by performing sectors (figure 1, 2, 3, 4), and the numbers of researchers by R&D performing sector (figure 5).
- Reveal dimensions of the innovation process, such as the impact of domestic scientific collaboration by institutions on research output (figure 6).
- Focus on output of universities and PRIs, such as the employment rate of doctorate holders (figure 7), and the sources of knowledge for firms innovation (figure 8).

Figure 5: Researchers by R&D performing sector, 2009

Per thousand employment
