

The International Atomic Energy Agency (Meeting Global Challenges through Better Governance: International Co-operation in Science, Technology and Innovation)

Since its establishment in 1957 the broad mandate of the IAEA has concerned the contribution of nuclear technologies to sustainable development throughout the world and the verification of their peaceful use. This case study focuses on two IAEA programmes directly related to international co-operation on science, technology and innovation and the deployment of new knowledge and innovations. The IAEA combines joint research, knowledge exchange, technical co-operation and capacity building to address global challenges through the development and implementation of sustainable solutions. In the absence of an implementing structure at the country level it has built partnerships with member country organisations or countries belonging to the United Nations.
