

Fostering innovation for green growth: Learning from policy experimentation (Making Innovation Policy Work: Learning from Experimentation)

This chapter explores the role that innovation can play in achieving a greener economy, with a focus on radical innovations that may help move from "business as usual" to a desirable green growth path. It reviews the role of different types of innovation for green growth, the rationale for innovation policies in a green growth strategy, and experience to date with policies that favour more radical green innovation. It concludes by making the case for mechanisms that facilitate the sharing of what works for green innovation.
