STI e-Outlook 2016

Every two years, the OECD conducts a major review of key global trends in science, technology and innovation (STI) and STI policies, and based on the latest information and indicators, examines country performances in science and innovation along with the most recent national innovation policy developments. A synthesis of this work is published in the "OECD Science, Technology and Innovation Outlook".

The Science, Technology and Innovation e-Outlook is an interactive web-based portal that provides full open access to the qualitative and quantitative information collected during the production process of the OECD Science, Technology and Innovation Outlook 2016. In addition to the 2016 policy and country profiles, the STI e-Outlook provides access to and navigation through the International Science, Technology and Innovation Policy (STIP) Database [1], a dataset of indicators for innovation policy analysis, a broad statistical platform of STI indicators (IPP.Stat [2]) and dynamic tools for countries to benchmark their performance against others.

This work was carried out by the OECD Directorate for Science, Technology and Innovation under the aegis of the OECD Committee for Scientific and Technological Policy (CSTP).
